Trenching at Tarouca Continues to Deliver Exceptional Results

W Resources Plc (AIM:WRES), the tungsten and gold exploration and development company with assets in Spain and Portugal, announces exceptional results from its current exploration programme at Tarouca, which covers 48 km² of former tungsten and tin mines 140 km East of Porto in Portugal.

Grab samples produced exceptional grades of 2.5%, 5.8%, and 9.4% WO₃ and trenches returned 7.2 metres of 0.86% WO₃, including 6.0 metres at 1.02%. The overall programme, which consists of detailed mapping and sampling of old workings, mineral occurrences and mineralised outcrops and trenching, has delivered strong results with 7.6% of the 250 samples assayed being in excess of 0.3% WO₃.

With this information W has now delineated the high value targets and defined a 1,500m drilling programme which will commence in Q1 2014.

Mr Michael Masterman, Chairman of W commented: "We are delighted to have identified the high value targets at Tarouca and now be in a position to commence the drilling programme in the new-year. This combined with the achievements of nearing production on budget and on time at La Parrilla tailings are testament to the valuable achievements by both management teams in Spain and Portugal."

The La Parrilla tailings plant continues to accelerate toward completion. The pre concentration plant is near completion and is expected to commence commissioning in November 2013. Photographs of the current development are shown on the Company's website at <http://www.wresources.co.uk/category/media/image-library/>
